ERP & Shipping Compliancy! In one simple, out-of-the-box solution

Achieving ERP and Shipping compliancy with QuikPAK can help manufacturers and distributors meet the following challenges:

- ✓ Complexities of DC, DSD & DVS shipments
- ✓ Shipment Accuracy
- ✓ Poor fill rates
- ✓ Late Shipments
- ✓ Carrier & Routing Challenges
- ✓ Floor-Ready problems
- ✓ Labelling & documentation errors
- ✓ Lack of supply chain visibility

QuikPAK: Pick, Pack and Ship Accurately!

QuikPAK is suited for manufacturers and distributors needing to improve order and shipment accuracy, as well as, reduced operational costs. QuikPAK allows companies the flexibility to manually pack shipments, or automate the shipment process, for incoming Sage 300 ERP orders of mixed SKUs packed in cartons, on pallets or in containers. Additionally, QuickPAK allows you to print pick lists and compliant shipment labels.

Combined with other Sage ISV software add-on modules QuikPAK can easily be configured to support Small Parcel Courier and LTL services, as well as automated packing using a handheld bar code device and integration with existing warehouse applications.

QuikPAK can be configured with Edisoft's Merchant™ EDI translation engine to satisfy EDI ASN 856 requirements and achieve full EDI compliance at a lower total cost of ownership than comparable solutions.

Eliminate Sales Order re-keying errors!

QuikPAK includes a polling agent that pulls orders entered into the Sage 300 ERP's sales order module regardless of whether the order arrives by EDI, fax, web store, Sage CRM or is manually keyed-in.

Eliminate Labelling & documentation errors!

With no re-keying of shipment details, the QuikPAK print engine accurately prints a range of shipping labels and DVS (drop shipment) packing slips that can include such relevant information as customer SKU codes, gift messages, expiry date of goods shipped et al. There are virtually no limits to what can be printed on your shipping labels and packing slips.

Improve Warehouse fill rates and avoid late shipments

Deploying QuikPAK provides your company with greater visibility than you may have thought possible. The ability to link and process multiple orders together as one shipment ensures that nothing gets missed and your packing process is error free.

QuikPAK includes easy to use icons that represent items, cartons and pallets, as well as, scan packing features, allowing your company to complete its orders and shipments accurately, with fewer staff needed.

QuikPAK effortlessly improves your vendor scorecards and makes you fully compliant with your Sage ERP controls!

100% Shipment Accuracy and Compliance is Achievable!

Mobile Scan & Pack: Packing Made Easy

Edisoft's Mobile Scan and Pack software module plugs in and runs on a handheld bar code scanning device that enables your warehouse staff to directly link with QuikPAK and manage Sage 300 ERP sales orders in real time, giving them a detailed list of items to pick and pack.

100% packing accuracy is achievable because sales order information is automatically pulled to QuikPAK from Sage 300 ERP without any rekeying. This ensures that the item scanned and packed matches the item on the order. The result:

- Shipment Accuracy
- Elimination of floor-ready problems,
- Targeted fill rates

Integration to small parcel courier and LTL services also eliminates carrier and routing problems. This ensures up-to-date inventories, as well as timely and accurate shipments that help you achieve an improved vendor scorecard ranking with all of your buyers.

Mobile Scan & Pack is built to work on numerous Windows Mobile and Windows CE based handheld scanners.
